Art Unit: 2655

In response to applicant's pre-amendment dated March 18, 2004, the following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 20-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Shimada et al (5623477).

The independent claims merely read on a disk having tracks and sectors, each of the sectors having pre-recorded address information recorded at an interval corresponding to a length equal to N not less than 2 (such limitation read on any length since the claim did not specify the "length of a record information unit of record information"). Thus such limitation read on recording address information at interval of the beginning of the information unit sectors. The claim further read on detecting the address information and generating a sync signal to the data on the disk. Basically the independent claims read on detecting the address information of the sectors on the disk to generate a sync signals. The reference shows the use of a recording apparatus wherein a pre-recorded address data at the beginning of the sectors is detected (ADRS) in order to generate a sync signal (SYNC) meeting the claimed invention.

Art Unit: 2655

With respect to the limitations of claims 21 and 26 see the use of a SYNC AND BKID are adjacent to each other.

With respect to the limitations of claims 22 and 27. The limitation "doubles" is interpreted as the address data being larger than the sync data as shown in fig 1 ADRS and SYNC and data to be recorded must be determined based on the address information in order for the recording to be operational.

With respect to the limitations of claims 23 and 28-see fig 1.

With respect to the limitations of claims 24 the claim read on tracking control.
